Mercedes-Benz

Symbols

Registered trademarks:

- AdBlue® is a registered trademark of the German Association of the Automotive Industry (VDA).

You will find the following symbols in this Service Booklet:

 **WARNING** Danger due to failure to observe the warning notices

Warning notices draw your attention to hazards that may endanger your health or life, or the health or life of others.

► Observe the warning notices.

 **ENVIRONMENTAL NOTE** Environmental damage due to failure to observe environmental notes

Environmental notes include information on environmentally responsible behavior or environmentally responsible disposal.

► Observe environmental notes.

 **NOTE** Damage to property due to failure to observe notes on material damage

Notes on material damage inform you of risks which may lead to your vehicle being damaged.

► Observe notes on material damage.

 These symbols indicate useful instructions or further information that could be helpful to you.

Vehicle manufacturer

Mercedes-Benz AG
Mercedesstraße 120
70372 Stuttgart
Germany

Welcome to the world of Mercedes-Benz

Thank you for choosing Mercedes-Benz. With ownership of a Mercedes-Benz comes our promise to support you whenever and wherever necessary. We look forward to assisting you with our worldwide service network, our products, services and warranties for the duration of your vehicle's service life.

Please read this Service Booklet and the Operator's Manual carefully to ensure that your vehicle runs properly.

PLEASE OBSERVE

WE STRONGLY RECOMMEND THAT YOU HAVE YOUR VEHICLE SERVICED BY YOUR AUTHORIZED MERCEDES-BENZ DEALER WHO IS FULLY EQUIPPED TO PROVIDE THIS SERVICE AND THAT GENUINE MERCEDES-BENZ PARTS BE USED.

THE USE OF DEFECTIVE OR NON-EQUIVALENT PARTS MAY RESULT IN YOUR EMISSION PERFORMANCE WARRANTY CLAIM BEING DENIED.

Mercedes-Benz Service 3

Information on the prescribed service work and maintenance work for your vehicle as well as on its confirmation in the central database, "Digital Service Booklet (DSB)".

Service information

⚠ WARNING Risk of accident due to malfunctions or system failures

If you do not have the prescribed service/maintenance work or any required repairs carried out, this could result in malfunctions or system failures.

▶ Always have the prescribed service and maintenance work or any required repairs carried out in a qualified specialist workshop.

Always observe the service display on the instrument display. Have the specified service carried out within the remaining time period or the remaining distance.

You can find more information on the ASSYST PLUS service interval display in the Operator's Manual.

The qualified specialist workshop carries out the service due at fixed intervals. This work is done either after a specified distance or after a certain

period of time, depending on which threshold is reached first.

Additional maintenance work is taken into account depending on time and distance driven. Additional maintenance work includes maintenance work carried out due to technical requirements, in cases of wear or on any optional equipment which might require servicing. This work is carried out and invoiced separately.

Depending on how the vehicle is used, the ASSYST PLUS service interval display may show the next service due date earlier than is indicated in this Service Booklet.

i You can always obtain up-to-date information concerning the servicing of your vehicle from a qualified specialist workshop, e.g. an authorized Mercedes-Benz Center. This could include, for example, an overview of maintenance work or possible additional maintenance work.

Always have the specified service and maintenance work carried out on schedule and documented according to requirements.

We are continually working to improve and further develop our vehicles. Therefore, please appreciate that we must reserve the right to make modifications to the scope of service and maintenance work.

Mercedes-Benz Service

With us, your vehicle is in the best of hands. At our authorized Mercedes-Benz Centers, you will find the experience and expertise gained over 100 years of vehicle construction.

i Please note any maintenance work not performed or not performed at the specified interval which results in the failure of the warranted component(s) or system(s) in question may not be covered by the Mercedes-Benz New Vehicle Limited Warranty.

We strongly recommend that you have maintenance work performed on your vehicle at your Mercedes-Benz Center, since it will be fully equipped to perform this service work.

Note that engine maintenance must be carried out according to special instructions and with special measuring equipment in order to meet the legal requirements for exhaust gas emissions.

Modifying or tampering with components of the exhaust gas treatment system is not permitted.

Your Mercedes-Benz Center is familiar with the applicable regulations.

Special service requirements

Special service requirements may be necessary, for example, for certain components after a breaking-in period.

Service and maintenance work will need to be performed more often or in addition if the vehicle is operated under arduous operating conditions or increased loads.

- ① You can obtain up-to-date information concerning the particular service requirements and service intervals of your vehicle at any time from a qualified specialist workshop. Mercedes-Benz recommends that you use an authorized Mercedes-Benz Center for this purpose.
- ① **Mercedes-AMG GT:** in racetrack mode, the vehicle is subject to higher loads, meaning that additional service and maintenance work is required. In such cases, contact a qualified specialist workshop. Mercedes-Benz recom-

mends that you use an authorized Mercedes-Benz Center for this purpose.

Digital service report

Digital Service Booklet (DSB)

Service and maintenance work that has been performed is confirmed in our central database. You receive a printout of the service report which you must keep until the next service. In addition to the current service report, your vehicle's complete service history can be viewed at any time.

Your vehicle's service data is thus thoroughly documented and can no longer be lost. Every authorized Service Partner can provide you with information on your vehicle's service data. This means that you can be assisted as quickly as possible, regardless of your location.

Regular checks

Check the following items regularly, e.g. weekly, when refueling or before long journeys.

- **Engine oil level:** further information on measuring the engine oil level can be found in the vehicle Operator's Manual.
- **Coolant level:** please refer to the Operator's Manual for the correct procedure for checking the coolant level.
- **Brake fluid level:** if brake fluid has to be added, see an authorized Mercedes-Benz Center to determine the cause, e.g. leaks or worn brake linings.
- **Windshield washer system:** add windshield washer fluid which has been mixed with Mercedes-Benz windshield washer solution/concentrate, and check for correct functioning as well as the wiper blades.
- **Lighting system**
- **Condition of tires and tire pressure:** check this at least every two weeks. Refer to the "Tires and rims" section in the Operator's Manual for

guidelines and correct procedures for checking the tires' condition and pressure.

Maintenance of the emissions control system

Gasoline engines

The U.S. Environmental Protection Agency and, in California, the Air Resources Board, have certified that your vehicle's emissions control systems fulfil the applicable emissions control standards. This vehicle also fulfills the emissions control standards for motor vehicles in Canada.

To ensure that the emissions control systems function as intended, regular maintenance is necessary for all vehicle components that influence the composition of exhaust gases and gas-like vehicle emissions.

The vehicle owner is responsible for the regular maintenance of the emissions control system, and for using unleaded premium grade fuel with an octane number of at least 91 (indicated on the filling pump) in all models with a gasoline engine, unless specified otherwise.

Consult the brochure with maintenance and warranty information and the Operator's Manual for more information.

If proper maintenance of the emissions control system is not carried out, this could result in the need for repairs that are not covered by the warranty for emissions control systems.

You can find explanations of the individual maintenance tasks at (→ page 7).

Precautions for emissions control systems – gasoline engines

Your vehicle is equipped with a three-way catalytic converter and a regulating oxygen sensor, in order to fulfill the current emissions standards. Keep your vehicle in good condition in accordance with the maintenance recommendations.

Observe the following instructions.

a) For all vehicle models with gasoline engines, you may use only premium-grade unleaded gasoline with an octane number of at least 91 (as specified on the filling pump), provided that there are no additional recommendations. The use of

gasoline that is not premium-grade unleaded may result in damage to the engine. Refer to the relevant precautions described in the Operator's Manual.

b) Leaded fuel must not be used under any circumstances. This would result in damage to the emissions control system.

c) In vehicles with a gasoline engine that is not designed for use with flex fuel, the permissible proportion of ethanol must not be exceeded. Observe the information in the "Operating fluids and filling capacities" section of the vehicle Operator's Manual. The use of an incorrect fuel may lead to engine damage.

d) The use of ethanol (E85) is permitted in some selected vehicle models. Vehicle models that can also be operated with E85 are labeled with a sticker on the fuel filler cap that reads: "Premium gasoline or E85 only!". Never use ethanol (E85) to operate your vehicle, unless the vehicle has been expressly designated as compatible with ethanol fuel (E85). The use of an incorrect fuel may lead to engine damage. Refer to the Operator's Manual for information on special precautions.

e) The specified engine maintenance work must be performed in its entirety and at the required intervals. For example, proper ignition timing and properly functioning spark plugs are important for catalytic converters to achieve their intended life. If the specified maintenance work is not performed correctly, this may negatively affect the vehicle's emissions control system and reduce its service life.

f) The operation of the emissions control system must not be modified under any circumstances. Modifications are prohibited by law. In addition, modifications could result in damage to catalytic converters, to higher fuel consumption and to a deterioration in the operating conditions of the engine.

g) Operational irregularities in the engine must be remedied immediately by a Mercedes-Benz Center. Irregular operating conditions may adversely affect the proper operation of the emissions control system.

If the engine diagnosis indicator lamp in the instrument cluster lights up while the motor is running, this is an indication of a potential mal-

function in the engine control system or emissions control system.

We recommend that you have the malfunction checked as soon as possible.

Precautions for emissions control systems – diesel engines

Your vehicle is equipped with emissions treatment equipment in order to fulfill the current emissions requirements for diesel engines that are applicable to the region in which the vehicle has been certified for sale. Keep your vehicle in good condition in accordance with the maintenance recommendations.

Observe the following instructions.

a) Refuel vehicles with diesel engines only with ULTRA LOW SULFUR DIESEL (ULSD) fuel. Observe the information in the “Operating fluids and filling capacities” section of the vehicle Operating Instructions. Refueling using unsuitable fuel can cause damage to the vehicle exhaust gas aftertreatment system.

b) Before refueling using bio-diesel, observe the information in the “Operating fluids and filling capacities” section of the vehicle Operating Instructions.

We strongly warn against using bio-diesel blends, which do not meet the fuel standards approved by us.

You can obtain further information from an authorized Mercedes-Benz dealer or at a gas station. If the identification of the bio-diesel mixture does not clearly indicate that it meets the fuel standards approved by us, the fuel may not be used. Damage arising from the use of fuels, which do not meet the fuel standards approved by us, are not covered by the Mercedes-Benz New Vehicle Limited Warranty.

c) The specified engine maintenance work must be performed in its entirety and at the required intervals.

d) The operation of the emissions control system must not be modified under any circumstances. Modifications are prohibited by law. In addition, modifications could result in damage to catalytic

converters, higher fuel consumption and a deterioration in the operating conditions of the engine.

If the Check Engine indicator lamp lights up on the instrument cluster while the engine is running, there may be a malfunction in the engine control system or the emission control system.

We recommend that you have the malfunction checked as soon as possible.

NOx exhaust gas aftertreatment with DEF (Diesel Exhaust Fluid)

Diesel Exhaust Fluid (DEF): AdBlue®

Vehicles with BlueTEC diesel engines: refer to the Operator's Manual for additional information on DEF (Diesel Exhaust Fluid). You will find the information in the "Technical data" section.

To function correctly, the NOx exhaust gas aftertreatment requires a denoxification agent (DEF). Ensuring the correct filling level and condition of the denoxification agent is part of the regular vehicle maintenance work. Under normal driving conditions, a full tank of the denoxification agent

should last until the next time maintenance work is performed.

DEF is a non-flammable, non-poisonous, colorless, odorless and water-soluble liquid.

! **NOTE** Malfunctions due to the dilution of DEF or the use of additive-enhanced DEF

The function of the NOx exhaust gas aftertreatment can be impaired by the use of unsuitable denoxification agents.

- ▶ Only use DEF in accordance with ISO 22241.
- ▶ Do not dilute DEF with water.
- ▶ Do not use additive-enhanced DEF.

Description of the maintenance work on the emissions control system

The composition of the exhaust gases is not only influenced by the emissions treatment system, but also by the various engine components and their settings.

For this reason, maintenance of the emissions control system must also include maintenance of these engine components. In practice, some of this work only involves tests. Nevertheless, these tests are important because irregularities, which could at a later stage result in poorer emission values, can be detected as early as possible. It is generally more cost-effective to have such issues remedied immediately, rather than waiting until they result in a need for expensive repairs. The maintenance intervals have been specified such that the vehicle will, under normal conditions, function properly between services (→ page 3).

Changing engine oil and replacing filters

Change engine oil and replace oil filters in accordance with the specified service intervals. If oil consumption increases, you must establish the reason for this and take the necessary measures to remedy the problem. Do not reset the ASSYST PLUS service interval display if you have refilled or changed oil outside the specified service intervals.

Replacing the engine air filter

Replace the engine air filter in accordance with the specified service intervals. In operating conditions where large dust levels are generated, the engine air filter must be replaced more regularly than is indicated by the ASSYST PLUS service interval display. Before removing it, clean the cover and the housing of the engine air filter.

Replacing the fuel filter

Replace the fuel filter in accordance with the specified service intervals.

Checking the condition of the poly-V-belt on the engine

The poly-V-belt is subject to wear and aging. Check for cracks and wear in accordance with the specified service intervals. If necessary, replace the poly-V-belt.

Replacing spark plugs

The spark plugs are subject to electrode erosion and must be replaced in accordance with the specified service intervals. If the vehicle is operated in difficult conditions, the spark plugs must be replaced more regularly.

Refilling DEF (Diesel Exhaust Fluid)

Diesel Exhaust Fluid (DEF): AdBlue®

Refill DEF in accordance with the specified service interval.

Refer to the Operator's Manual for more information, e.g. for identifying your vehicle's filler neck for DEF.

Service documents

Service and maintenance work that has been performed is confirmed in the Digital Service Booklet (DSB) (→ page 4).

If repairs have been performed on your vehicle, these are not recorded or documented in the Service Booklet. For this reason, keep these receipts safe, together with your vehicle documentation.

For information on warranty, please consult the brochure containing maintenance and warranty information.

Your Mercedes-Benz Dealer will be happy to provide you with all necessary information on the maintenance of your vehicle.
